INSTITUTE OF CHIEF AI OFFICERS

AI is becoming an enterprise capability. AI leadership must become a professional discipline.

ICAIO is being established as an independent, not-for-profit professional institution for executives accountable for enterprise AI in Australian organisations.

For Chief AI Officers and equivalent leaders with enterprise-wide AI responsibility, whatever their title.

Express interest in the Founding Council → | Explore Enterprise AI Leadership

Pause

WHY NOW

Australia cannot afford to follow.

In the internet era, Australian organisations could watch, learn and adopt what worked elsewhere. In an era of abundant intelligence, no country has that luxury. Gartner predicts that by 2029, a quarter of Global 500 companies will continuously release AI-powered offerings, making fast-follower strategies obsolete.[1]

Much of the focus on AI is still on machine learning and data, but the role is changing. Gartner predicts that by 2027, 75% of chief data and analytics officers not seen as essential to their organisation's AI success will lose their C-level position,[2] and that by 2030, 80% of Global 500 companies will contractually make their CIO or Chief AI Officer the "Evidence Custodian" for AI accountability.[1] The remit, responsibility and accountability of AI leaders is broadening to whole-of-business transformation.

ICAIO is being established to help develop the shared standards, competencies and practices that this broader accountability requires.

1. Gartner, Top Strategic Predictions for 2027 and Beyond, 15 September 2026.
2. Gartner, CDAO Agenda Survey for 2025, 12 May 2025.

ENTERPRISE AI LEADERSHIP

One discipline. Eight connected domains.

Enterprise AI leadership integrates these disciplines to convert rapidly evolving AI capability into sustainable organisational performance.

Explore the eight domains

01 **Ethical AI** — **For Boards:** The role of AI, AGI, ASI and GI in humanity and society, and how organisations determine and define their position.	02 **Governance** — Responsible AI, risk, assurance, accountability, regulation and board oversight.	03 **Strategy** — Enterprise AI strategy, portfolio choices, investment and alignment.	04 **Transformation** — Operating-model and process transformation enabled by AI.
05 **Value** — Business cases, benefits, productivity, growth and value realisation.	06 **Capability** — Data, platforms, models, agents, architecture, vendors and organisational capability.	07 **Adoption** — Workforce, skills, change, behaviours and organisational adoption.	08 **Operating AI** — The continual management, improvement and optimisation of the operation of AI models, agents and systems, workflows, and outputs.

WHY ICAIO

A professional institution for enterprise AI leadership.

ICAIO's purpose is to professionalise the leadership of artificial intelligence in Australian organisations. Its proposed work has four priorities.

01	Define the profession	Develop shared accountabilities, competencies and professional standards for enterprise AI leadership.
02	Build the executive community	Bring together practitioners across sectors to exchange experience and help shape the discipline.
03	Develop practical knowledge	Build a Body of Knowledge, frameworks and research grounded in enterprise practice.
04	Develop a representative voice	Create a foundation for enterprise AI leaders to contribute informed perspectives to policy and professional debate.

About ICAIO

FOUNDING COUNCIL

Help define an emerging profession.

ICAIO is bringing together a Founding Council of senior practitioners to help shape enterprise AI leadership in Australia.

The proposed Council will help define the profession's accountabilities, competencies, Body of Knowledge and research priorities. Its work will inform the institution as it develops.

We welcome expressions of interest from executives with enterprise AI accountability across Australian business, government and higher education. Membership is by invitation, for a 12-month founding term.

The Founding Council is distinct from the legal Board. An expression of interest does not guarantee an invitation. Council membership or a director appointment.

Express interest in the Founding Council →

Explore the proposed Council role

The Council may help define

- Enterprise AI Leadership
- The CAIO role and accountability framework
- A professional competency framework
- The Body of Knowledge
- Education and professional development requirements
- The research agenda and maturity model

INITIAL PROFESSIONAL AGENDA

Start with the foundations of professional practice.

The proposed initial agenda focuses on five outputs. Their scope and priorities will be shaped with founding participants.

01	Professional Charter	A shared statement of the profession's purpose, principles and responsibilities.
02	CAIO Competency Framework	A framework for the capabilities required to lead enterprise AI.
03	AI Leadership & Accountability Framework	Clarity on leadership responsibilities, governance and accountability for enterprise AI.
04	Enterprise AI Maturity Model	A basis for assessing organisational progress and identifying priorities for development.
05	State of Enterprise AI Leadership in Australia	A proposed research report examining how the discipline is developing in Australian organisations.

Explore the proposed agenda

INDEPENDENCE

Professional credibility starts with independence.

ICAIO is being developed around six founding principles. The intended model keeps professional standards and research independent of vendor and sponsor control.

Practitioner-led	Shaped by executives accountable for enterprise AI.	**Independent**	Vendors and sponsors do not control standards or research.
Evidence-based	Grounded in enterprise practice and credible research.	**Responsible**	Focused on value creation while keeping AI governable.
Collaborative	Complements rather than attempts to own the entire Australian AI ecosystem.	**Profession-first**	Institutional credibility takes priority over rapid monetisation.

Help define the profession.

Bring your experience of enterprise AI accountability to the founding conversation.

Express interest in the Founding Council →

ABOUT ICAIO

Professionalising the leadership of AI in Australian organisations.

ICAIO exists to develop the professional standards, capabilities, community, knowledge and practices required by executives responsible for AI strategy, transformation, governance, capability, adoption and value creation.

WHO ICAIO IS FOR

The professional body for Australia's enterprise AI leaders.

ICAIO represents an executive accountability, not only a job title. It is being established for leaders who carry enterprise-wide responsibility for AI, including:

- Chief AI Officers
- Chief Data & AI Officers
- Heads of Enterprise AI
- CIOs, CTOs or CDOs with enterprise AI accountability
- Chief Transformation Officers or equivalent executives with enterprise-wide AI responsibility

ICAIO is not a vendor association, a consultancy or a technology community. It is being established as an independent, not-for-profit professional institution that reinvests any surplus in its purpose.

WHAT ICAIO WILL DO

Four priorities for the profession.

The work is organised around the eight domains of **Enterprise AI Leadership**.

01	Define the profession	Develop shared accountabilities, competencies and professional standards for enterprise AI leadership.
02	Build the executive community	Bring together practitioners across sectors to exchange experience and help shape the discipline.
03	Develop practical knowledge	Build a Body of Knowledge, frameworks and research grounded in enterprise practice.
04	Develop a representative voice	Create a foundation for enterprise AI leaders to contribute informed perspectives to policy and professional debate.

STANDARDS AND EDUCATION

Setting the standard, working with educators.

ICAIO will keep setting professional standards separate from delivering education.

01	Standards	ICAIO defines the competencies, Body of Knowledge, learning outcomes and professional standards for enterprise AI leadership.
02	Education	Universities and other education providers may design programs aligned to those requirements.
03	Recognition	ICAIO may recognise appropriate external programs under provider-neutral rules.
04	Designation	Any future professional designation would assess experience, competence and continuing professional development, not course completion alone.

Certification will not be rushed. The professional standard, practitioner community, Body of Knowledge and evidence base come first.

WHO IS ESTABLISHING ICAIO

Transparent from the start.

ICAIO is being established by Nicholas Dalla Riva, who will serve as Founder and inaugural Chief Executive Officer.

> For more than 25 years, my work has been about re-imagining business with emerging technology: using it to transform how organisations operate, to create new products and to build new business models that change markets.
>
> AI is the most significant of these shifts so far. It changes strategy, operating models, risk and the workforce at once, and executives are being made accountable for it before the profession has agreed what good looks like.
>
> I am establishing ICAIO so that the people carrying that accountability can define the standards, knowledge and community the role needs, and so that Australian organisations turn AI into market impact and lasting commercial returns.
>
> **Nicholas Dalla Riva, Founder and Chief Executive Officer**

About Nicholas

Nicholas Dalla Riva has spent more than 25 years leading digital and technology-led business transformation, new products and new business models, across financial services, technology and growth markets.

At NAB he led digital strategy and marketing, then direct sales and service strategy, before proposing and founding the digital capability for UBank, NAB's branchless bank. He secured $20 million in initial funding and developed a three-minute online loan application that simplified identity verification in Australian banking, laying the foundations for a digital bank that has since grown to more than one million customers. He later turned around the venture-backed comparison platform HelpMeChoose.com.au, taking it from a $2.4 million annual loss to break-even in nine months, and in 2009 founded Vocalise, one of Australia's first integrated growth marketing agencies.

In 2026 he completed Cornell University's Chief Artificial Intelligence Officer Program, alongside executive education in AI governance, risk and transformation from Cornell and the University of Oxford's Saïd Business School. He holds a BA in Philosophy and Politics from the University of Melbourne and a Postgraduate Diploma in eCommerce from Monash University.

The Chief Executive Officer's remuneration and performance will be set by the independent Board.

GOVERNANCE

Independent governance from the outset.

ICAIO's intended governance model separates the institution's leadership, its Board and its practitioners.

01	Independent Chair	An independent Chair, separate from the Founder and executive leadership.
02	Board	A Board of approximately five to seven directors with formal governance duties.
03	Founding Council	A Founding Council of senior practitioners, distinct from the legal Board.
04	Independence from sponsors	Sponsors and vendors do not control professional standards or research.
05	Related parties	Any transaction with a Founder-related entity is disclosed, independently approved on arm's-length terms, with the Founder excluded from the decision.
06	Ownership	Professional standards and frameworks belong to ICAIO.

The independent Chair and Board will be announced as they are appointed.

HOW ICAIO IS BEING ESTABLISHED

Built in stages, with credibility first.

The establishment sequence puts practitioners, frameworks and evidence in place before a public launch. ICAIO is currently at Stage 1.

Stage 1 — CURRENT	Stage 2	Stage 3	Stage 4	Stage 5
Coalition	**Define**	**Evidence**	**Foundation membership**	**Public launch**
Recruit a small number of credible leaders and establish the Founding Council.	Define the profession, charter, accountabilities and initial competency framework.	Conduct research and benchmarking; develop substantive professional knowledge.	Invite an initial, carefully selected cohort of enterprise AI leaders.	Launch with credible leaders, research and professional frameworks in place.

FOUNDING PRINCIPLES

Professional credibility starts with independence.

Practitioner-led	Shaped by executives accountable for enterprise AI.	**Independent**	Vendors and sponsors do not control standards or research.
Evidence-based	Grounded in enterprise practice and credible research.	**Responsible**	Focused on value creation while keeping AI governable.
Collaborative	Complements rather than attempts to own the entire Australian AI ecosystem.	**Profession-first**	Institutional credibility takes priority over rapid monetisation.

Help define the profession.

Bring your experience of enterprise AI accountability to the founding conversation.

ENTERPRISE AI LEADERSHIP

One discipline. Eight connected domains.

Enterprise AI leadership integrates these disciplines to convert rapidly evolving AI capability into sustainable organisational performance.

Eight domains, one discipline. Each will be refined with the Founding Council. Read each domain

01
Ethical AI
For Boards: The role of AI, AGI, ASI and QI in humanity and society, and how organisations determine and define their position.

02
Governance
Responsible AI, risk, assurance, accountability, regulation and board oversight.

03
Strategy
Enterprise AI strategy, portfolio choices, investment and alignment.

04
Transformation
Operating-model and process transformation enabled by AI.

05
Value
Business cases, benefits, productivity, growth and value realisation.

06
Capability
Data, platforms, models, agents, architecture, vendors and organisational capability.

07
Adoption
Workforce, skills, change, behaviours and organisational adoption.

08
Operating AI
The continual management, improvement and optimisation of the operation of AI models, agents and systems, workflows, and outputs.

THE DOMAINS IN DETAIL

What enterprise AI leaders are accountable for.

A working description of each domain, offered as a starting point for the Founding Council to refine.

01
Ethical AI
FOR BOARDS

The role of AI, AGI, ASI and QI in humanity and society, and how organisations determine and define their position.

LEADERS ARE ACCOUNTABLE FOR
- Set the organisation's position on AI's role in society, and keep it current as capability advances towards AGI and beyond.
- Decide where AI should and should not be used, and the human oversight it requires.
- Give the board a clear view of the ethical questions AI raises for the organisation.

THE QUESTION TO ANSWER
What is our position on AI, and would we be comfortable defending it publicly?

02
Governance
Responsible AI, risk, assurance, accountability, regulation and board oversight.

LEADERS ARE ACCOUNTABLE FOR
- Establish AI risk, assurance and accountability frameworks.
- Align AI use with regulation and emerging standards.
- Give the board clear oversight of AI use, performance and incidents.

THE QUESTION TO ANSWER
Who is accountable when an AI system gets it wrong?

03
Strategy
Enterprise AI strategy, portfolio choices, investment and alignment.

LEADERS ARE ACCOUNTABLE FOR
- Set the enterprise AI strategy and investment portfolio.
- Align AI priorities with the organisation's strategy.
- Decide where to build, buy or partner.

THE QUESTION TO ANSWER
Where will AI create the most advantage for us over the next three years?

04
Transformation
Operating-model and process transformation enabled by AI.

LEADERS ARE ACCOUNTABLE FOR
- Redesign operating models and processes around AI.
- Sequence change across functions and business units.
- Manage the dependencies between technology, people and process.

THE QUESTION TO ANSWER
Which parts of how we work should be redesigned, not just automated?

05
Value
Business cases, benefits, productivity, growth and value realisation.

LEADERS ARE ACCOUNTABLE FOR
- Build credible business cases for AI investment.
- Track benefits, productivity and growth against those cases.
- Scale or stop initiatives on the evidence.

THE QUESTION TO ANSWER
How do we know our AI investment is paying off?

06
Capability
Data, platforms, models, agents, architecture, vendors and organisational capability.

LEADERS ARE ACCOUNTABLE FOR
- Ensure the data, platforms and architecture AI depends on.
- Make sound model, agent and vendor choices.
- Build the organisation's AI skills and teams.

THE QUESTION TO ANSWER
Do we have the data, platforms and people to deliver our AI ambitions?

07
Adoption
Workforce, skills, change, behaviours and organisational adoption.

LEADERS ARE ACCOUNTABLE FOR
- Lead workforce skills and change.
- Shape the behaviours and ways of working AI requires.
- Measure uptake and sustained, safe use.

THE QUESTION TO ANSWER
Are our people using AI well, and safely?

08
Operating AI
The continual management, improvement and optimisation of the operation of AI models, agents and systems, workflows, and outputs.

LEADERS ARE ACCOUNTABLE FOR
- Monitor the performance of models, agents and workflows in operation.
- Continually improve and optimise their outputs.
- Manage cost, reliability and change over time.

THE QUESTION TO ANSWER
Are our AI systems still performing as intended, and getting better?

WHY ETHICAL AI COMES FIRST

A position before a plan.

Ethical AI addresses the philosophical role of artificial intelligence as it relates to humanity and society, from today's systems through artificial general intelligence (AGI), artificial superintelligence (ASI) and quantum intelligence (QI).

It asks each organisation to determine and define its position on AI before planning how to use it. That position then guides every other domain.

Help define the discipline.

The Founding Council will refine how each domain is described, how they connect, and what competence looks like in each.

Express interest in the Founding Council →

FOUNDING COUNCIL

Help define the profession of enterprise AI leadership.

ICAIO is forming a Founding Council of senior practitioners to shape the standards, competencies and knowledge that executives accountable for enterprise AI will work by.

Express interest in the Founding Council →

WHY A FOUNDING COUNCIL

A profession defined by the people who practise it.

Accountability for enterprise AI is arriving faster than agreed professional standards, competencies and operating practices.

ICAIO is not asking executives to endorse an institution that is already fully designed. The Founding Council will help design it, so that the profession reflects the realities of leading AI in Australian organisations.

THE FOUNDING YEAR

What the Council will work on.

Over a 12-month founding term, the Council is expected to help define:

- Enterprise AI Leadership and its eight domains
- A professional competency framework and Body of Knowledge
- The research agenda and an enterprise AI maturity model
- The CAIO role and accountability framework
- Education and professional development requirements
- Governance, accountability, value and performance frameworks

The proposed founding programme runs in four stages.

Stage 1	Stage 2	Stage 3	Stage 4
Define	**Standardise**	**Benchmark**	**Publish**
Founding Council, Professional Charter and the Enterprise AI Leadership definition.	Competency Framework 1.0 and the AI Leadership & Accountability Framework.	An Australian enterprise AI leadership study and executive benchmarking.	State of Enterprise AI Leadership in Australia, and an inaugural executive forum.

WHO WE ARE LOOKING FOR

Senior executives with enterprise-wide AI accountability.

The Council will bring together approximately 12 to 20 senior practitioners. Members may hold the title Chief AI Officer, or carry equivalent accountability as a Chief Data & AI Officer, Head of Enterprise AI, CIO, CTO, CDO or Chief Transformation Officer.

Membership will be drawn deliberately across sectors, including financial services, government, healthcare, telecommunications, retail, resources, professional services, technology and higher education.

WHAT IS INVOLVED

A clear, proportionate commitment.

01	**Term**	A 12-month founding term.
02	**Time**	A 90-minute Council session each month, mostly online, with one in-person forum during the year.
03	**Honorary role**	Council roles are honorary. No fees or expenses are paid, and members cover their own costs until ICAIO generates revenue.
04	**Recognition**	Founding Council members receive complimentary ICAIO membership. Once ICAIO publicly lists the Council, members may add the role to their public career profiles.
05	**Personal capacity**	Members take part in a personal capacity and do not represent their employers unless explicitly approved.
06	**Not a Board seat**	The Founding Council is distinct from the legal Board. Council membership does not make a person a director.

HOW APPOINTMENT WORKS

By invitation, after an alignment discussion.

01	**Expression of interest**	Executives express interest, or are invited directly by ICAIO.
02	**Alignment discussion**	Selected candidates are invited to a conversation about the Council's purpose, principles and the contribution they could make.
03	**Approval**	Initial appointments are made with ICAIO's independent Chair. Once the Council is established, new appointments are approved by existing Founding Council members.

> Membership of the Founding Council is by invitation. An expression of interest does not guarantee an invitation. Council membership or a director appointment.

Help shape the profession from the start.

Bring your experience of enterprise AI accountability to the founding conversation.

PROPOSED AGENDA

Start with the foundations of professional practice.

The proposed initial agenda focuses on five outputs. Their scope and priorities will be shaped with founding participants.

INITIAL OUTPUTS

Five proposed starting points.

01	Professional Charter	A shared statement of the profession's purpose, principles and responsibilities.
02	CAIO Competency Framework	A framework for the capabilities required to lead enterprise AI.
03	AI Leadership & Accountability Framework	Clarity on leadership responsibilities, governance and accountability for enterprise AI.
04	Enterprise AI Maturity Model	A basis for assessing organisational progress and identifying priorities for development.
05	State of Enterprise AI Leadership in Australia	A proposed research report examining how the discipline is developing in Australian organisations.

THE FOUNDING YEAR

Built in four stages with the Founding Council.

The initial outputs are proposed to be developed over the Council's 12-month founding term.

Stage 1	Stage 2	Stage 3	Stage 4
Define	**Standardise**	**Benchmark**	**Publish**
Founding Council, Professional Charter and the Enterprise AI Leadership definition.	Competency Framework 1.0 and the AI Leadership & Accountability Framework.	An Australian enterprise AI leadership study and executive benchmarking.	State of Enterprise AI Leadership in Australia, and an inaugural executive forum.

About the Founding Council

THE WIDER PROGRAMME

Potential first-wave professional knowledge.

Beyond the initial five, ICAIO has identified a wider body of work for the profession. All items are proposed. None has been published.

Foundations The shared definition and statement of the profession.	ICAIO Professional Charter	INITIAL
	Enterprise AI Leadership definition	
	ICAIO Body of Knowledge	
Roles and accountability Who is accountable for what, and how decisions are shared across the executive team.	CAIO Role & Accountability Framework	GOVERNANCE
	AI Leadership & Accountability Framework	INITIAL · GOVERNANCE
	CAIO, CIO, CTO, CDO and CRO decision-rights model	GOVERNANCE · STRATEGY
Capability and maturity What competence looks like for leaders, and maturity for organisations.	CAIO Competency Framework	INITIAL
	Enterprise AI Maturity Model	INITIAL
Domain frameworks Practical frameworks for specific domains of Enterprise AI Leadership.	Ethical AI Position Framework	ETHICAL AI
	AI Investment, Value & Performance Framework	VALUE
	Agentic AI Governance Framework	GOVERNANCE · OPERATING AI
	AI Workforce & Adoption Framework	ADOPTION
Evidence Research into how the discipline is developing in Australian organisations.	State of Enterprise AI Leadership in Australia	INITIAL

HOW THE WORK WILL BE DONE

Credible, independent and practitioner-led.

01	Practitioner-led	Developed with the executives who carry enterprise AI accountability, starting with the Founding Council.
02	Evidence-based	Grounded in enterprise practice and credible research, with methods and sources stated.
03	Independent	Sponsors and vendors do not control professional standards or research findings.
04	Owned by the profession	Professional standards and frameworks belong to ICAIO.

Help shape the agenda.
